RESEARCH INTERESTS

I am broadly interested in data science and artificial intelligence with a focus on data mining and machine learning. In particular, I am interested in Data-efficient Learning, Information Trustworthiness Evaluation and Knowledge Discovery.

RESEARCH EXPERIENCE

Data Mining and Machine Learning Lab — Sep. 2016 - Present
Research Assistant — Advisor: Jing Gao
Project i: *Data Efficient Learning*
  – A major bottleneck of deep learning models is the reliance on massive sets of hand-labeled training data. We aim to improve data efficiency for deep learning models when labeled data is scarce or noisy. The explorations are in the meta-learning [KDD'20a, 24], weak supervision [AAAI'20], few-shot/zero-shot learning [24, 22], and data augmentation [SDM'20].

Project ii: *Information Trustworthiness Evaluation*
  – The explosion of information from a variety of sources has made it increasingly important to check the credibility and reliability of the data . We devote the efforts to mitigate misinformation [KDD'18a, AAAI'20, 23] and validate the extracted knowledge [CIKM'20, KDD'20a].

Project iiii: *Knowledge Discovery*
  – Lots of human knowledge is encoded in text. To make knowledge resources more findable, accessible, interoperable, and reusable (FAIR), we focus on extracting structured knowledge from massive collection of text [24, KDD'20b, Bioinfomatics].
